

# 5 SIMPLE THINGS YOU CAN DO FOR A SAFE AND CLEAN WORK ENVIRONMENT

## WHAT YOU CAN DO TO PROTECT YOUR BUSINESS BETWEEN D3 CLEANINGS

It's clear that D3 Clean anti-viral deep cleaning is essential to safety as schools, restaurants and other businesses reopen and welcome people back inside. But it's just as important to maintain high levels of cleanliness with your own daily mitigation efforts. These five simple measures, combined with regular D3 Clean disinfection and decontamination, will help ensure safer work, social and learning environments.

**1. CONTINUALLY WIPE SURFACES.**  Using bleach and other inexpensive cleaning agents on doorknobs, light switches, desktops and other surfaces throughout the day will help stop the spread of bacterial and viral infections.

**2. PROVIDE UV LIGHT SANITATION.**  Compact and affordable ultraviolet lights are widely available for use on cell phones, key fobs, writing implements and other small high-touch objects.

**3. VENTILATE WHERE YOU CAN.**  Open windows and doors to provide a healthier level of air quality for the people inside; stagnant recirculated air has a higher potential for transmission.

**4. ELIMINATE POROUS SURFACES.**  Soft surfaces such as drapes, upholstery, carpeting and other fabrics can trap dirt and pathogens; consider reducing—or eliminating—the number of cloth surfaces in your environment wherever possible.

**5. DISPOSE OF USED ITEMS PROMPTLY.**  It's good practice to encourage the use of disposable tissues, napkins, paper towels and utensils when a virus is present. Just make sure to dispose of them right away in hygienic plastic bags.

### About D3 Clean

Only Clean Harbors D3 Clean offers the proven processes, specialized equipment and skilled personnel to protect your business from the risks of COVID-19. We've helped schools, businesses and other organizations safely reopen their doors—from a small, owned daycare center to a nationwide chain of restaurants. Our dedicated D3 Clean workforce of 1,200 highly trained experts is on the front lines of COVID-19-related remediation and mitigation, ensuring the highest possible levels of cleanliness and safety.
